

Concept of possible assessment outcomes - Victorian Public Entity Classification Framework

This is an example of what work value assessment outcomes could look like for entities of different sizes.

In all cases, it's assumed that the CEO will be assessed with having the highest work value and the subordinate executives will therefore be assessed at lower work values.

These assessments would be used to inform remuneration outcomes with reference to guidance from the [Victorian Independent Remuneration Tribunal](#) on how to determine a final remuneration value.
